# REEBOK STEP

## STEP IT UP - 10 CLASSIC MOVES

THE REEBOK STEP IS THE ORIGINAL PIECE OF FITNESS EQUIPMENT USED WITHIN STUDIO CLASSES WORLDWIDE. THESE ARE JUST 10 OF THE MANY MOST-LOVED STEP EXERCISES TO TORCH CALORIES AND BURN FAT.

### BASIC STEP UP

A basic yet fundamental unilateral exercise which trains each leg independently to improve symmetry while toning the glutes, hamstrings and thighs.

Try the Step at different heights for added difficulty.

#### OFF-SET PUSH UP CROSSOVER

A more challenging take on the traditional push-up, the offset version places extra emphasis on the triceps. Alternate sides with one hand on the elevated Step to feel the burn!

#### **SQUAT POP OVER**

Keep most of your weight over the Step, push up off the foot and pop your body over the platform, repeating side to side. Stay low to the ground - a low centre of mass will make the exercise more effective on the muscles and improve balance. This one works the glutes, hamstrings as well as the inner and outer thighs.

#### SIDE STEP + HIGH KICK

Add a high kick into your basic side step to raise the heart rate further and improve flexibility.

#### STEP JUMP

Build explosive, plyometric power by jumping onto the step with both feet at the same time. Repeat from side to side.

#### MOUNTAIN CLIMBER

A raised platform makes the floor-based mountain climber just a little bit more challenging. This one's good for lower body power and engaging the core muscles.

#### SIDE STEP + LATERAL RAISE

This exercise focuses on the stabiliser muscles throughout the body. It also targets the outer thigh and glutes while improving balance.

## STEP UP + OVERHEAD PRESS

The Reebok Step doesn't have to be used in isolation. Grab a pair of dumbbells and add an overhead press as you step up onto the platform.

#### STRAIGHT ARM PLANK UP

An ideal bodyweight movement focusing on core strength and endurance. You'll also see arm and shoulder benefits from this, along with posture improvement.

#### **BURPEE JUMP**

The Burpee Jump will have your heart rate through the roof! This hybrid move builds strength, burns fat and conditions the entire body.
